LogTracking since 2002

## Professional & accurate load measuring

With tScale you automatize the handling of loads provided by trucks and trains.

Just by driving through the tScale portal you will receive a precise and completely digitized measuring result of the volume and specifications of the specific load.

### With tScale you get:

- Overview and control of your supply
- Precise registration of volume on each train or truck load
- Load information transferred safely to your own IT-system
- Improved interaction with both supplier and customer
- Automated measuring 24/7
- Transparent, automated, and efficient process flows
- Reduction in measuring time, manual coordination and actors involved – giving an overall more aligned process for your organization and your partners

## tScale

When implementing tScale to handle your bulk measuring, the highly advanced technology of tScale will be integrated to your process flow and IT-structures, to improve physical and data logistics. Measuring of incoming loads is accelerated and the time used on the factory premises is minimized.

The individual loads are recorded with photo-optical camera modules to determine the load volume highly accurate. The camera modules also enable excellent visual documentation of the loads and the load carriers.

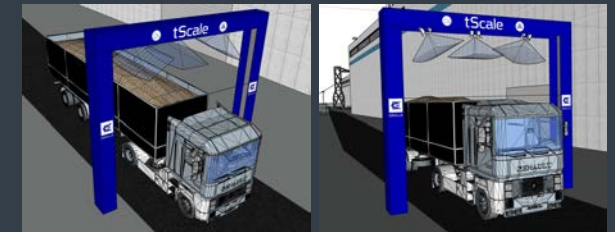

With tScale the measuring process is fully automated. Just scan your loading ticket, drive through and tScale provides the load volume.

## What do you get?

tScale will eliminate human errors, improve work safety, and keep your stock numbers sharp and up to date. Full transparency and visual documentation will benefit not just you but also your suppliers and hauliers.

tScale is developed by experienced IT-specialists and professionally designed for load recording on trucks and trains and enables the measuring of bulk material. This technology will help your organization follow the industry's transition, into a more digital line of business, in the most efficient and secure way.
